

## United Illuminating Company

### OASIS Registration Information on the ISO New England Node

1. Every Transmission Customer company needing Transmission Service on the ISO New England OASIS node must first register the company with NERC. Registration should be done via an electronic form available at <http://www.tsin.com/>. Registration will require a previously obtained Dun and Bradstreet number. Information and an electronic form for obtaining a DUNS number can be found on the [Dun and Bradstreet](#) web site.
2. Each registered company must have an assigned Security Administrator, who will approve all other company users that will access the OASIS site. The Security Administrator must fill out the [SECURITY ADMINISTRATOR FORM](#) and follow the instructions for mailing or faxing it to ISO New England. The Security Administrator must [obtain an X509 electronic certificate](#) and [register the certificate on the OASIS](#). The Security Administrator is responsible for the approval of User Authentication Requests for other company users. Once your Security Administrator Form is processed you will be able to act on User Authentication Requests at the User Registration and Access Requests Administration link, available on the [main OASIS page](#) when you are logged in. Each individual user within the registered customer company must access the OASIS site using an X509 electronic security certificate.
3. Before making a transmission reservation, the transmission customer must have or enter into a Service Agreement under the ISO-NE Transmission Tariff for Non-Firm Point-to-Point and/or Firm Point-to-Point Transmission Service, as appropriate. Applications to obtain transmission service from the United Illuminating Company can be found at the [UI Transmission Services](#) web page. Once an application has been approved, a Service Agreement will establish the terms and conditions under which the customer may take transmission service from The United Illuminating Company. A blank Form of Service Agreement may also be found on the UI link above.
4. The ISO-New England will take the appropriate steps necessary to ensure that the user/customer's X509 certificate is assigned the necessary permissions in order to make transmission service requests.
