

As indicated in the previous UI Standard Service & Last Resort Service RFP, the State of Connecticut has notified UI that it is considering switching its load to competitive supply effective July 1, 2017. If this occurs, UI estimates that this will result in an aggregate monthly load reduction to each 10% Standard Service tranche (as follows)*:

	Est. State Load Standard Service
January	262
February	253
March	276
April	281
May	325
June	323
July	282
August	256
September	285
October	271
November	280
December	291
Total MWh per 10% tranche	3,387

*Note that this is an estimate only. UI cannot provide any assurance that these amounts are accurate or whether or not the State of Connecticut will switch to competitive supply.
